Finding multiplicity among Domain Concepts

Multiplicity

- Multiplicity defines how many instances of a type A can be associated with one instance of a type B, at a particular moment in time.
- For example, a single instance of a Store can be associated with "many" (zero or more) Item instances.

Multiplicity

*	T	Zero or more; "many"
1..*	T	One or more
1..40	T	One to forty
5	T	Exactly five
3, 5, 8	T	Exactly three, five or eight.
